

Installation for SAP PS

- ◆ Prerequisite: You need Java runtime 1.4.2 or later. For a free download go to <http://java.sun.com/j2se/1.5.0/download.jsp>
- ◆ Download the Afinion Project Viewer from <http://www.afinion.de/english/kontakt/emailquery.php?target=full>
- ◆ Run the installation ProjectViewer.exe. This unpacks the files into a directory of your choice (default: C:\Program Files\ProjectViewer). No further setup required.
- ◆ Select your program start options: Desktop, Quick Start, Program Start.
- ◆ If SAP GUI is installed on your computer, Afinion Project Viewer requires the file LibRfc32.dll, Version 6206.6.1456.4314 or newer to display SAP PS schedules. By default you will find this file in C:\Program Files\ProjectViewer\PViewer. Copy the file to the C:\Windows\System32 directory.
Alternatively you can download the file from <http://service.sap.com/connectors> (SAP Login required). Go to SAP Java connectors/Tools & Services | Download SAP JCo Release 2.1.3 | Windows 2000, ... - 32 bit SAP JCo as zip file.
- ◆ The installation is now completed.
- ◆ Start the Afinion Project Viewer. Press "DB connection", then "New" and select "SAP". Then enter your connection parameters. Under Server enter the router string (if present) and the ip address of the application server. You may retrieve this data from the SAP GUI or alternatively ask your administrator.
- ◆ Connect, then select from one of four buttons what should be displayed.
